

Drum Clamps

Drum Clamp - Forklifts are truly meant to move, lift and store items placed on pallets. For businesses which make use of drums, they often require an attachment in order to deal with storing, lifting and moving them. There are some various attachments which a business can use for all of your drum lifting, moving, and storing needs. These attachments are particularly meant to be able to deal with drum containers - hence there is no risk of damage to the product or drum container whenever they are moved, lifted or stored.

Drum Positioner And Grab

The drum positioner can be utilized in order to load and unload drums off of drum stands, vehicles and racks. These are presented in three or four tine models. This particular attachment is totally mechanical, hence enabling the person operating it to be able to operate all from the comfort of the lift truck seat. Able to move large and extra large plastic drums, steel, its capacity is 210 liters. This accessory is meant for drum pyramid stacking.

The drum grab is fork designed and mounted with the sole objective of dealing with steel drums which have rolling hoops. Even though the purpose for the design was to deal with steel drums with rolling hoops, the drum grab could accommodate the moving of large and extra large plastic drums. Drum capacity maximum is 220 liters for plastic barrels and 210 for steel drums with rolling hoops.

The Rotator

The drum rotator is one more forklift accessory which mounts onto the forks themselves. Their purpose is to be able to lift the drum and turn it upside down. The drum is clasped into the drum rotator utilizing a clamp which fits around the middle of the drum. The rotation is executed by either a crank handle or a continuous loop chain. The crank handle is utilized for operations that occur beneath shoulder level. For operations that must happen higher than shoulder level, the continual loop chain will be used.

The drum tines are simple fork or carriage mounted attachments. They are intended for stacking and unstacking 210-liter steel drums. Stacking requires nothing elaborate, merely easy horizontal positioning of the drums. The carriage-mounted attachments decrease the load center of the drums.

Automatic Tongs

Drum tongs are available both semi-automatic and automatic versions which could be utilized in the open topped and tight head metal drum styles. The drum tongs could also be attached several different ways to the lift truck. One method is to connect them under a fork-mounted hook. Another way is to connect them to a carriage mounted jib or a fork-mounted jib. Either the semi automatic and the automatic have a drum capacity of 210 liters. With the automatic, there is no requirement for the one operating it to ever leave the seat of the lift truck.

Rim Grip Handler

The Rip Grip Drum Handler is the perfect alternative for lift truck accessories, whenever there is a need to store drums with inadequate space available. This particular accessory could be utilized on both one hundred twenty liter and two hundred ten liter drums. The Rim Grip Handler operates by utilizing metal jaws so as to grab the edge of the drum. It lifts the drum and sets it down without needing any space between all the drums. The typical model in the trade is a zinc-plated handler, although, this accessory comes accessible in stainless steel for the food and drink industry.
